EXPERIENCE

Mobile App Developer Intern

Aug 2023 – Sep 2023

Roofstacks

Istanbul, TR

- Successfully completed my internship in RoofStacks as a Mobile Application Developer Intern
- Mainly worked with Kotlin
- Got into Android Development, Kotlin Coroutines, Android Jetpack Compose and had the time to apply and practice all of these technologies

Electrical & Electronics Intern

Sep 2022 – Oct 2022

BorgWarner Inc. (Phinia)

Izmir, TR

- Successfully completed my internship as an Electrical & Electronics Engineer
- Worked with industry - scaled PLCs, Proprietary Programming Languages (especially with SIEMENS machines) and IT Department
- Had a chance to experience how big scaled systems work in an automotive factory

Software Developer

Nov 2021 - July 2022

DC Academy

IZTECH Teknopark, Izmir, TR

- Worked as a part of the mobile application team that developed a transportation application which includes crypto currencies using Dart and Flutter, while simultaneously working on Smart Contract Development, Website Development, Social Media Management, Project Planning and Team Management which improved both my technical and social skills in related areas
- My main focus was building the application
- Took part in the planning phase of the app
- Worked on smart contracts using Solidity
- Designed and coded websites using WebFlow
- Had the role of Social Media Manager of the crypto project BoxingBoyz's Turkey branch
- Had the role of manager of the Crypto Trading team of DC Academy Turkey
- All of these areas taught and improved me in many ways, such as teamwork, communication skills, being a leader, team management, planning of a mobile application and taking major responsibilities

PROJECTS

CanSat | TEKNOFEST CanSat Competition, Team Polariz

Jan 2026 – Present

- Taking part in a 6 - person team that consist of 4 Electronics and 2 Mechanical Engineers to compete in TEKNOFEST CanSat competition
- Responsible for the visual systems
- Working on building a system that can 720p livestream from the satellite at an altitude approximately 2km above the ground and also saving the visuals simultaneously
- Had an opportunity to work with Raspberry Pi, Custom Designed Electrical Circuits, Arduino and Python

PWM Data Encoder - Decoder | IZTECH, Electronics Design Project

Jan 2026 - Present

- As a team that includes 3 Electronics Engineers we are building a system that is able to communicate using 2 bit Pulse - Width Modulation
- We are both building the encoder and the decoder
- Simulations are built using LTSpice and the real - life application takes place in our school's electronics laboratory

Automated Pet Feeder via Analog Weight Emulation & Recycled Actuators | *IZTECH, Embedded Systems Project*

Jan 2026 - Present

- As a team that includes 3 Computer Engineers and an Electronics Engineer, myself, we are building an automated system which utilizes a robotic arm to act as an automatic pet feeder
- We are building this in order to solve a common problem that pet owners have. When they have to leave the house for a period of time and can't find anyone to take care of their pet
- Responsible for the electronics part
- Programming Arduino microcontrollers to make the robotic arm work as we intended with high sensitivity

Foody App | *IZTECH, AI Project*

Sep 2025 - Jan 2026

- Developed the app as the final project of a master's degree "AI in practice" class
- Developed a fully functional mobile app integrated with AI where the user can take the photo of ingredients and in just a few seconds the app returns a full meal recipe
- The app also allows to put in extra filters like vegan, gluten free, serving size & cooking skill - level

EDUCATION

Izmir Institute of Technology, Bachelor's Degree

Electronics & Communications Engineering

Izmir, TR

2019-Present

Bornova Anatolian High School, BAL

Math & Science

Izmir, TR

2015-2019

RELATED COURSEWORK

Circuit Design 1&2

Logic Circuits, Digital System Design

Probability & Stochastic Processes

Feedback & Control Systems

Embedded Systems

Signals & Systems, Communication Systems 1&2, Satellite Communications

Data Science, Machine Learning, AI in Practice

TECHNICAL SKILLS

Languages: Python, MATLAB, C/C++, Dart/Flutter, Kotlin, HTML/CSS, JavaScript

Developer Tools: MATLAB, Quartus, LTSpice, TinkerCAD, Arduino IDE, VS Code, Git/GitHub, Android Studio

OTHER

Languages: English (C1), Italian (B1), Turkish (Native)

Hobbies: Swimming, Basketball, Playing Drums, Movies
